Funded by the United States Department of Agriculture, the Food Systems Summit will bring together stakeholders from the food supply network and the research community, along with educational and government sectors. Participants will create a shared vision of a resilient food system, set the foundation for new food networks and initiate partnerships to move the food network forward.

The conference is part of an ongoing process for the development of a National Science Foundation Engineering Research Center (ERC) at NMSU focused on resilient food supply networks.

Individuals interested in registering for the event can visit the Summit website at using the QR code or URL.
